

PROFESSIONAL SUMMARY

Infrastructure Automation Engineer with 3 years of experience designing and managing enterprise automation solutions using Ansible (AAP/Tower), Terraform, and CI/CD pipelines. Experienced in building event-driven remediation systems, integrating monitoring platforms (LogicMonitor, BigPanda) with automation workflows, and developing scalable Infrastructure-as-Code solutions on Azure. Hands-on expertise in AAP APIs, playbook standardization, and automation orchestration.

- WORK EXPERIENCE
- DevOps Engineer

Wipro Ltd | Mar 2023 – Present [3YOE]

 - Designed and implemented **event-driven auto-remediation workflows** integrating LogicMonitor, BigPanda, Jenkins, ServiceNow, Docker, and Ansible, reducing manual incident handling by **~40%**
 - Built **CI/CD-driven automation pipeline (Jenkins → Docker → Python → ServiceNow → AAP API → Ansible)**, enabling controlled execution, failure handling, and automated ticket creation
 - Developed and optimized **Ansible playbooks and reusable roles**, improving execution efficiency and reducing redundant task runs
 - Leveraged **Ansible Automation Platform (AAP) APIs** for job execution, workflow orchestration, and automation integration
 - Automated infrastructure operations (device IP updates, downtime handling, bulk monitoring tasks), ensuring consistency across dynamic environments
 - Engineered monitoring solutions in LogicMonitor, including data source creation, dashboards, and alerting strategies
 - Automated infrastructure baseline reporting, reducing execution time from 3–4 hours to under **1 minute**
 - Collaborated with DevOps and operations teams to identify automation opportunities and standardize workflows

Achievements:

- Received “**Emerging Star Award**” for contributions to automation and monitoring improvements

TECHNICAL SKILLS

Automation & IaC: Ansible (AAP/Tower), Terraform, Python, YAML

DevOps & CI/CD: Jenkins, Docker, Git, GitLab

Cloud & Systems: Azure, Linux, Windows Server

Monitoring & ITSM: LogicMonitor, Prometheus, Grafana, ServiceNow, BigPanda

- KEY PROJECTS
- Azure AutoInfra – End-to-End Infrastructure & Monitoring Pipeline

[-Link](#)

 - Built Azure infrastructure using **Terraform modules** (VNet, NSG, VM provisioning)
 - Automated configuration via **Ansible** and deployed monitoring (Prometheus + Grafana)
 - Enabled reusable, single-run infrastructure + monitoring setup
- AgentOps – AI-Assisted Ansible Platform

 - Developed LLM-based system (Ollama – Gemma 2B) to generate & execute **Ansible playbooks**
 - Implemented reusable templates and chatbot-driven automation workflows
 - Explored INT8 quantization for efficient local inference

EDUCATION

M.Tech (Pursuing)	– BITS Pilani	CGPA: 7.5
Master of Computer Applications	– Ajeenkya DY Patil, Pune	CGPA: 7.74
Bachelor of Computer Science	– MGM College, Nanded	CGPA: 8.63
