PROFESSIONAL SUMMARY

Infrastructure Automation Engineer with 3 years of experience designing and managing enterprise automation solutions using Ansible (AAP/Tower), Terraform, and CI/CD pipelines. Skilled in building event-driven remediation systems, integrating monitoring platforms with automation workflows, and developing scalable Infrastructure-as-Code solutions on Azure. Hands-on expertise in AAP APIs, playbook standardization, and automation orchestration. Aiming to leverage platform engineering skills to build internal developer platforms and self-service infrastructure capabilities that accelerate software delivery.

TECHNICAL SKILLS

Automation & IaC: Ansible (AAP/Tower), Terraform, Python, YAML | DevOps & CI/CD: Jenkins, Docker, Git, GitLab | Cloud & Systems: Azure, Linux, Windows Server | Monitoring & ITSM: LogicMonitor, Prometheus, Grafana, ServiceNow, BigPanda

WORK EXPERIENCE

DevOps Engineer	Wipro Ltd	Mar 2023 - Present 3 YOE
- Designed and implemented event-driven auto-remediation workflows integrating LogicMonitor, BigPanda, Jenkins, ServiceNow, Docker, and Ansible, reducing manual incident handling by approximately 40%. - Built CI/CD-driven automation pipeline (Jenkins to Docker to Python to ServiceNow to AAP API to Ansible), enabling controlled execution, failure handling, and automated ticket creation for infrastructure changes. - Leveraged Ansible Automation Platform (AAP) APIs for job execution, workflow orchestration, and automation integration across enterprise systems. - Provisioned Azure infrastructure using Terraform modules including VNet, NSG, and VM provisioning, establishing repeatable Infrastructure-as-Code patterns. - Automated configuration via Ansible and deployed monitoring stack (Prometheus + Grafana), enabling reusable single-run infrastructure and monitoring setup. - Developed and optimized Ansible playbooks and reusable roles, improving execution efficiency and reducing redundant task runs. - Automated infrastructure operations including device IP updates, downtime handling, and bulk monitoring tasks, ensuring consistency across dynamic environments. - Automated infrastructure baseline reporting, reducing execution time from 3-4 hours to under 1 minute, enabling rapid self-service reporting. - Engineered monitoring solutions in LogicMonitor including data source creation, dashboards, and alerting strategies for enterprise infrastructure. - Collaborated with DevOps and operations teams to identify automation opportunities, standardize workflows, and drive operational efficiency.		

KEY PROJECTS

Azure AutoInfra - End-to-End Infrastructure and Monitoring Pipeline

Built Azure infrastructure using Terraform modules (VNet, NSG, VM provisioning), automated configuration via Ansible, deployed monitoring (Prometheus + Grafana), and enabled reusable single-run infrastructure plus monitoring setup.

AgentOps - AI-Assisted Ansible Platform

Developed LLM-based system (Ollama - Gemma 2B) to generate and execute Ansible playbooks. Implemented reusable templates and chatbot-driven automation workflows. Explored INT8 quantization for efficient local inference.

EDUCATION

M.Tech (Pursuing)	BITS Pilani	CGPA: 7.5
Master of Computer Applications	Ajeenkya DY Patil, Pune	CGPA: 7.74
Bachelor of Computer Science	MGM College, Nanded	CGPA: 8.63

ACHIEVEMENTS

- Received Emerging Star Award for contributions to automation and monitoring improvements.
